

Services at Rocky Mountain Cancer Centers

WE ARE DEDICATED TO PROVIDING THE MOST ADVANCED CANCER CARE IN THE REGION.

Cutting-Edge Treatments

As a part of the US Oncology Network, we have access to the most advanced cancer treatments available.

Chemotherapy: Most chemotherapy medications are given intravenously at our cancer center. RMCC also offers in-house dispensing of oral chemo medications.

Hormone therapy: This type of therapy is given as a pill or injection and can be used to treat certain cancers that rely on hormones to grow.

Radiation therapy: RMCC offers cutting-edge radiation treatment at our radiation centers.

Immunotherapy: This treatment, usually administered intravenously every two to four weeks, helps the immune system fight off cancer cells.

Targeted therapy: Also called precision medicine, this treatment targets cancer cells while avoiding healthy cells. Targeted therapy is available for certain types of cancer.

Theranostics: For some cancers, we offer theranostics, the process of using radiopharmaceuticals, at our dedicated theranostics suite.

Diagnostic Imaging

Our dedicated imaging centers feature CT and PET/CT scanners, and our Mobile PET/CT Coach gives patients convenient access to imaging services close to home.

Laboratory Services

Our fully accredited on-site laboratories provide reliable, rapid results for many tests, including complete blood count (CBC), clotting tests, tumor markers, and chemistry tests.

Pharmacy

Patients can fill oncolytic and supportive care prescriptions at our on-site pharmacy, staffed by our medically integrated pharmacy team.
